

Enterprise Privacy, Data Protection & AI Governance

*A single, coordinated capability for multinational,
multi-department organizations.*

WHO WE ARE

We help multinational organizations manage privacy, data protection, and AI governance as one coordinated program — not three disconnected ones.

"Governance that matches how your organization actually works — by function, by jurisdiction, by risk."

Multinational enterprises operate across dozens of jurisdictions and just as many internal functions — each with its own relationship to sensitive data and AI. DPOBOARD builds the assessments, policies, training, and governance structure that let large, complex organizations meet their obligations without slowing the business down.

We work across four connected capability areas: Data Privacy, Data Protection, Artificial Intelligence Governance, and industry-specific programs tailored to the sectors we serve.

WHAT WE BELIEVE

Governance programs fail when they're generic. A single all-employee policy under-serves the functions carrying the most risk and over-burdens the ones carrying the least. We build programs that are specific — to your functions, your jurisdictions, and your actual risk profile.

OUR CAPABILITIES

Four connected pillars, one governance model.

Data Privacy

Privacy program design, assessments, and compliance support aligned to GDPR, CCPA/CPRA, and comparable global frameworks.

Data Protection

Technical and organizational controls — access management, data mapping, vendor risk — sized to how sensitive your data actually is.

Artificial Intelligence

AI system inventory, risk classification, and governance oversight mapped to the EU AI Act and emerging global AI regulation.

Industries We Serve

Sector-specific programs that reflect the regulatory and operational realities of your industry, not a generic template.

OUR APPROACH

A methodology built for organizations that don't stop moving while the program is built.

01

Assess

Map data, AI systems, and obligations across every function and jurisdiction.

02

Design

Build policy, controls, and training scoped to actual function-level risk.

03

Implement

Roll out across departments and regions with role-based training and clear ownership.

04

Sustain

Maintain the program through ongoing assessment and governance, not a one-time project.

WHAT SETS US APART

Function-scoped, not one-size-fits-all

Training and policy calibrated to what each department actually does — HR, IT, Marketing, Engineering, Legal, and more.

Built for multinational complexity

Programs designed from the outset to work across multiple jurisdictions and regulatory regimes at once.

Privacy, protection, and AI governance as one model

A single coordinated framework instead of three disconnected compliance tracks.

INDUSTRIES WE SERVE

Programs shaped by the sector they serve.

Every industry carries a different mix of data sensitivity, AI adoption, and regulatory exposure. We tailor each engagement to the realities of your sector.

Financial Services

Healthcare & Life Sciences

Technology & SaaS

Manufacturing

Retail & Consumer

Professional Services

Don't see your industry listed — our approach is built to adapt to sectors beyond this list as well.

Let's talk about your organization's governance program.
